

Bright Coffee Shop Analytics Dashboard

A real-time analytics dashboard delivering sales, customer behavior, and product performance insights for a multi-location coffee retailer — built with Databricks SQL.

Dashboard (Databricks workspace):

<https://dbc-bf4adfc2-54bd.cloud.databricks.com/dashboardsv3/01f18ce0f0471949bb30cb717def1e63/published?o=7474660577300899>

2. Overview

Bright Coffee Shop needed a single view into sales performance across locations, but data lived in disconnected spreadsheets and POS exports. This project builds a Databricks SQL pipeline — from raw transaction data to a curated dashboard — so managers can spot trends without manual reporting.

3. Problem Statement

- Which products and categories drive the most revenue?
- When are customers actually buying — which days, which hours?
- Is the average transaction value healthy, and what's dragging it down?

4. Key Metrics & Insights

Metric	Value
Total Revenue	\$698.81k
Total Transactions	149,116
Total Quantity Sold	214,470
Avg. Transaction Value	\$4.69

Top insights surfaced by the dashboard:

1. **Coffee & Tea drive revenue** — together they account for the large majority of total revenue, led by Barista Espresso and Brewed Chai Tea.
2. **Weekdays outperform weekends** — weekday revenue (~\$500k) is roughly 2.5x weekend revenue (~\$199k).

- 3. **Mornings are peak hours** — morning sales (~\$370k) outpace afternoon (~\$250k) and evening (~\$65k).
- 4. **Small purchases dominate** — 62.7% of sales are small-basket purchases, pointing to an upsell/bundling opportunity.

6. Dashboard Widgets

- KPI summary cards (revenue, transactions, quantity sold, avg. transaction value)
- Date range filter (dashboard-level parameter)
- Average daily spending trend (line chart)
- Weekday vs. weekend revenue comparison
- Transaction volume by day of week
- Revenue breakdown by product category and product type
- Revenue by time of day (morning / afternoon / evening)
- Purchase-size distribution (small / medium / large)
- Store location filter (*note: dataset permissions limited this view — see Known Limitations*)
- Top products by transaction volume

7. Known Limitations

- Store-location revenue breakdown is not available in the current build due to a dataset permissions restriction. Resolving this would unlock location-level performance comparisons.

8. Business Improvements

Product Strategy

- Bundle underperforming products with high performing products.

Inventory Optimisation

- Increase stock levels for best selling coffee and tea products.

Marketing Campaigns

- Launch promotions during slower afternoon and evening trading periods.
