

Building a Dashboard with Lovable
Live link: <https://coffee-biz-dash.lovable.app>

I used Lovable to create an interactive dashboard for this case study based on my findings.

Prompt:

Create a responsive Executive Business Intelligence dashboard for Bright Coffee Shop using a modern coffee-inspired design.

The application should have a cream background with espresso brown headers and sage green accents.

At the top, include four KPI cards displaying Total Revenue (\$698.81K), Total Transactions (149,116), Quantity Sold (214,470), and Average Transaction Value (\$4.69).

Add interactive filters for Month, Store, Product Category, and Day Type. Display Revenue by Product Category and Revenue by Product Type as horizontal bar charts.

Include a Store Performance chart, Sales by Time Bucket chart, Sales Category donut chart, and a Top 10 Products horizontal bar chart.

Beneath each section, include a concise business insight explaining what the chart reveals.

Add a recommendations section with three cards covering Marketing Campaigns, Inventory Optimisation, and Product Promotion. Use rounded cards, subtle shadows, smooth hover effects, and responsive design.

The dashboard should be mobile responsive and have smooth hover animations.

Improve spacing, alignment, typography, colours and responsiveness. Ensure every chart is aligned. Use a consistent colour palette. Improve the visual hierarchy.

Replace any generic dashboard appearance with an executive consulting dashboard.

The final application should look like it was designed for a Fortune 500 CEO.

Maintain accessibility, responsiveness and a modern premium design. There is a price elasticity graph missing
